"Advancing a tradition of excellence in spatial data through teamwork and innovation."

B-52 Orientation Ride Shows Importance of DMA Mission

By John Liebsch

On 24 March 1992 I accomplished something that I had worked toward since my assignment almost three years ago as DMA Liaison Officer to U.S. STRATCOM. At 1715 that day I departed Ellsworth AFB, S.D., on a five-hour B-52 training mission.

The actual planning for this mission had been completed before I arrived, but on the day before I flew I did get to work with the Bomb/Nav personnel who developed the training route. I also toured the area where the Data Transfer Unit Cartridges (DTUCs) were generated for the B-52 navigation system.

Showtime for the crew and I was 1200 on 24 March at which time I participated in the target studies, flight planning, and weather briefing for our mission. I took this opportunity to talk to the crew about DMA's products, and it was quickly evident that they knew DMA's importance in their mission. They put a lot of faith in our products and appreciated the quality of the data received from DMA. It was nice to see first-hand that the results of DMA's efforts are being put to good use and are so heavily relied upon.

As stated earlier, our flight took off at 1715; therefore, all operations were accomplished at night. The mission was against simulated targets using simulated weapons. I sat in the Instructor Pilot (IP) seat. From that

John Liebsch

point I could see everything in and outside of the cockpit, and also have access to the Radar/Navigation area downstairs.

There were a number of highlights on this trip. During the flight we were scheduled to be refueled by a KC-135 for about 30 minutes. After take-off we were notified that the tanker would be

late. At that point the navigator started pulling out various DMA charts to plan what to do while waiting for the late KC-135. Although it may not "seem" like much to simply replan for an additional 30-45 minutes of flight time, the work that navigator did in a short time using a set of dividers, a calculator, and DMA's charts WAS IMPRESSIVE.

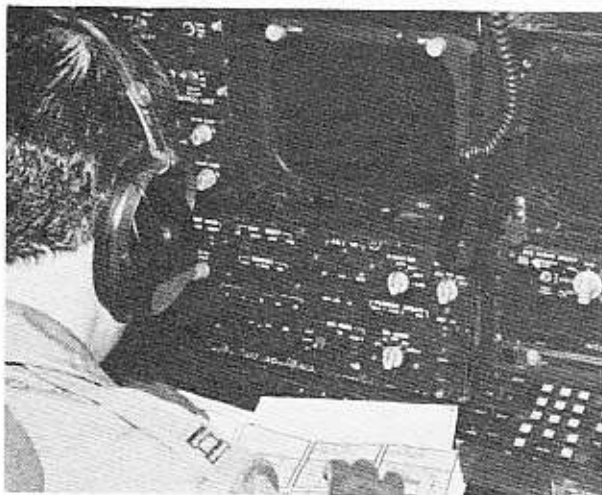

Other highlights of this flight were:

a. flying 400 feet off the ground at 370 knots during the night using night vision goggles (I have never been so glad that our products are of such high quality); and

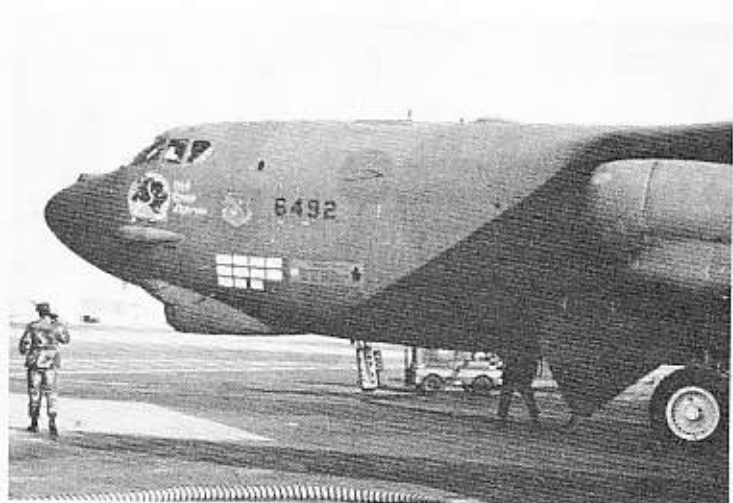

b. working with the radar navigator and launching simulated SRAMs and ALCMs.

It's impossible for everyone at DMA to get to do something like this, and that's unfortunate. An experience like this really emphasizes the importance of DMA's mission as well as our customer's reliance on our products. DMA's mission is extremely important to the war fighter and those war fighters are very pleased with the job we are doing. Everyone at DMA should be extremely proud of this fact.

The article is an extract from a report that Liebsch prepared, which was submitted to the Orienter by the DMAAC Deputy Director and Directorate of Programs, Production and Operations. As Liaison Officer to the U.S. Strategic Command, Liebsch is assigned to Offutt AFB, Neb.

The radar navigator uses DMA data.

B-52G on the flight line at Ellsworth AFB, S.D.

DMA Awards Presented

DMA Director Maj. Gen. William K. James attaches a streamer to the DMAAC flag held by MSgt. William Beam, Chief of Military Personnel. DMAAC received the first Oak Leaf Cluster to the Joint Meritorious Unit Award for "exceptional support" during Operations Desert Shield and Storm. The award was presented during DMA Awards Day at the Stouffer Concourse Hotel. Also honored were 48 individuals and groups from DMAAC, along with Desert Storm veteran SFC Russell Taylor (GGB), DMA Soldier of the Year.

Changing Requirements Prompt Relocations

Space utilization requirements and a couple of renovation projects are the "drivers" behind upcoming personnel relocations, according to cartographer Charles (Chuck) Moore (PPII). Along with cartographer John Hinkel (PPII), Moore co-chairs the Space Panel, the representative working group that implements decisions of the Facilities Review Board (FRB).

Production under the Digital Production System (DPS) is being consolidated in Building 36, Moore said. Most support functions, with the dispensary a notable exception, are to be located in outlying buildings. To accommodate the resulting relocations, the Space Panel has been working with the Engineering and Construction Division (FEE) to identify and prepare suitable work sites.

In addition, the completion of a

major renovation project involving staff offices on the sixth floor of Building 36 has prompted relocations to the sixth floor of the Process Improvement Office (PIO), Resource Management Office (CMRA), Program Integration Division (PPI), and Program Integration Branch (PPII). All moves are scheduled to be completed by Aug. 3. Although not a full renovation, due to budget constraints, the upgrade of sixth floor facilities is the

first major improvement there in many years, Moore said. Other occupants are the Director, Deputy Director, Technical Director, Deputy Director for Programs, Production and Operations, Inspector General, and Associate General Counsel.

Consolidation of support functions in outlying buildings at 3200 S. 2nd St. will involve several relocations:

The DMA Accounting and Finance

DMA Units Close in Texas, Overseas

Forty-one years of continuous operation came to an end for the DMA Hydrographic/Topographic Center's San Antonio Office when it closed June 30. The same day--halfway around the world--the DMA Combat Support Center's detachment at Cubi Point, Philippines, also shut down. Military units served by the three-person detachment will be able to obtain DMA products from the CSC Pacific Office in Hawaii and a detachment in Japan.

The San Antonio Office was one of four Army Map Service field offices established in 1951, which later

became units of DMA. Offices in Providence, R.I., and Kansas City, Mo., closed in the late 1980s. The Louisville, Ky., office remains as a unit of DMAHTC.

The decision to close the San Antonio Office stemmed from overall reductions in DoD's budget and size and DMA's need to streamline operations. Of the 140 civilian employees on duty when the closing was announced in January, 46 retired, 35 were placed within DMA, 35 were placed with other federal agencies, 21 resigned, and three remained on board to complete work at HTC.

On the Move

Michael W. Kazmaier (TMS) has been reassigned as chief of the Transition Management Team's Data Integration Division (TMI).

You are invited to lend a hand to deserving youngsters during KID HELP 92, a Back-to-School Donation Drive sponsored by the Voluntarism Task Force of the Federal Executive Board of St. Louis to help homeless and needy families with school-age children. It will be held Aug. 5-19. Employees may bring items such as school supplies, new or like-new clothing, new athletic or tennis shoes and disposable diapers and deposit them in marked containers located in the corridors near the snack bar in Building 36 and outside the cafeteria at South Annex. All donations will be distributed through the St. Louis Homeless Resource Bank.

The Wall

By Peggy West (DPOC)

The Viet Nam War Memorial
Came to St. Louis today.
Thousands came for love,
Healing and honor to pay.

The names carved in the stone
Represent lives that were lost.
They made the ultimate sacrifice.
Their life's blood paid the cost.

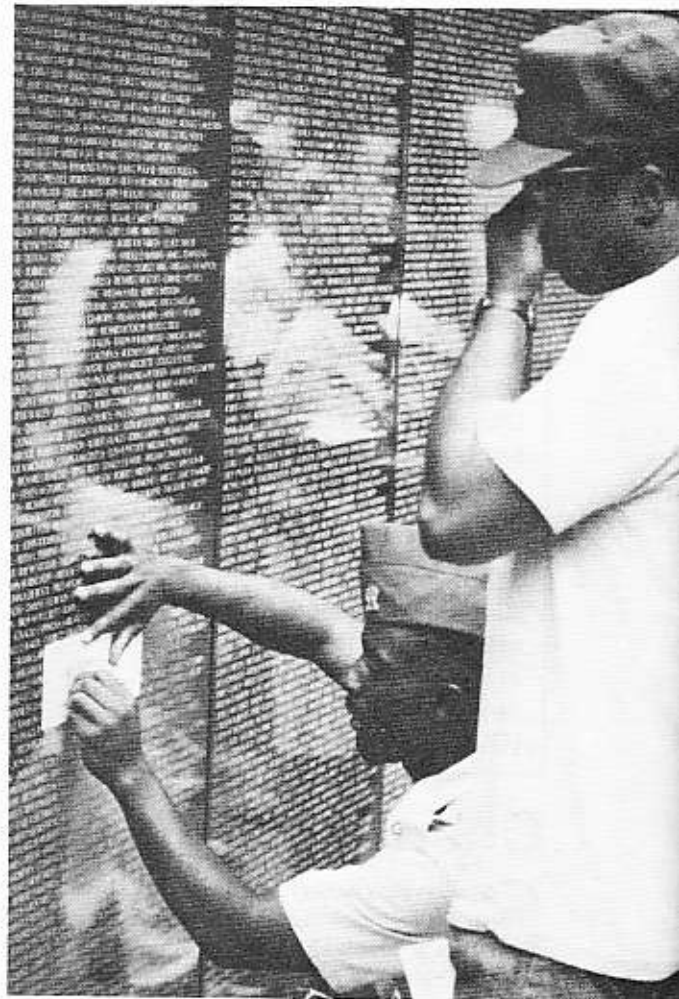

Some who came still wait.
Their ghosts not laid to rest.
For the MIA/POW families
Some word they still quest.

Children came too for healing
For them it was more than a wall.
To honor their Daddy's memory
Whose face they may not recall.

The Nam Vets came in numbers
To remember comrades true.
To give them the honor
That was too long overdue.

The Memorial Wall was here
To heal and ease the pain,
To give us all some hope
From tragedy would come gain.

STEPANIK

Pratte Leads Dramatic Rescue

A dramatic rescue in Bonne Terre, Mo., June 26 was led by electronic mechanic David Pratte (FEMTC). A volunteer fire fighter, Lt. Pratte used a ladder, rushed to the scene by roofers working nearby, to remove a man from a smoke-filled third floor apartment.

The victim, a man in his 60s, was taken down the 35-foot ladder in a "fireman's carry" by Pratte, who was assisted by another fire fighter.

A neighbor had alerted the fire department after hearing the victim shouting for help from his window.

When Pratte arrived on the scene the victim was leaning out the window, Pratte told the Flat River, Mo., *Daily Journal*. Pratte's first concern was that the victim might fall. By the time Pratte reached him on the ladder, his face was blackened by the smoke from the fire.

"He was weak and on the point of

passing out. As we came down the ladder, he collapsed a couple of times. He was so weak he couldn't hold his own weight." The victim was taken to a hospital in Farmington, Mo., where he was reported in stable condition.

Fire Chief Butch Keen praised the roofers who brought the ladder, Pratte, and others for "reacting quickly and appropriately. It was very significant, as this could have been a real catastrophe. The years of training, that is what it's for and it really paid off. And the fellows don't get a penny for what they do," he added.

The Director's Hotline is available for employees who have questions or suggestions for improvements in all areas. Call 263-4178, 24 hours a day. An answering machine will take your call.

A Lift for Employees Fitness Center Opens at DMAAC

If the sign-in sheet is any indication, a large number of men and women are making a new stop in their daily routines at the DMAAC St. Louis Fitness Center.

Located in historic Building 2 at 3200 S. 2nd St., the Center opened with a ribbon-cutting by the Director, Col. Marcus J. Boyle, July 13. DMA Director Maj. Gen. William K. James also took time to visit the Center during his visit to St. Louis for DMA Awards Day July 22.

The fully renovated building, built in 1850 to house coal, is now filled with arrays of specialized weight and aerobic exercising equipment to meet most needs. For weight lifting, the equipment includes machines for the inner thigh, leg curl, leg extension, 50-degree press, shoulder press, lat row, lat pulldown, triceps, biceps, abdomen, lower back, and rotation of the torso. The weight equipment is set up in a training circuit that starts with the leg muscles and works its way up. The aerobic equipment includes two treadmills, two life-cycles, three stairmasters, a Monark bike and a Nordic track. Staff also plan to acquire an upper body aerobics machine for disabled employees.

The Fitness Center is open to all employees 24 hours a day, seven days a week. If users should find the building locked, Security will open it for them. Showers and lockers for day use are available. Food and drink are not allowed in the building, and users are required to wear proper workout attire, including soft-soled shoes.

Employees who enroll in the DMAAC St. Louis Wellness and Fitness program will receive a free health screening, instruction on using the equipment, help in designing their workout program, and opportunities to participate in group activities. The program will be run by exercise physiologist Shari James-Kipp, as Sally Gambacorta has accepted a position in New Hampshire. Call Nancy Klein, Wellness Program Manager, at 4374 for details.

We Asked Them...

"Why should I take the time to submit a Process Improvement After Action Report?"

THEY ANSWERED...

"During my assignment here I've become amazed by the DMAAC work force and how they make process improvement part of their daily work ethic. They don't think of taking credit for doing the right thing. But they should, and they can. Process Improvement After Action Reports (PIAAR) are a tool for reporting savings as a result of a process improvement. The form is very easy to complete and calculating the benefit of the process improvement is done by the HQ DMA PIO. Take time to take credit." --Major Charles White, Process Improvement Office (PIO)

"I'd say, 'Why NOT submit a PIAAR?' You've done all the leg work, either through the Suggestion Program or a Process Improvement Initiative (PII). Submitting a PIAAR is finishing the job and getting credit for what you've already done. In our department we've had improvements with some nice-sized values. We've got two valued at more than \$200,000 so far this year. This is good for our department. PIAARs show that the department is saving the taxpayer's money..." --Joseph Statum, Geodesy and Geophysics Dept. Production Office (GGP)

"PIAARs come to our office in MC. HR (Human Resources) has been alerting me to suggestions that might justify a PIAAR. Basically a present process must have been changed or a new process implemented that will save workhours or dollars. PIAARs document the savings and facilitate recognition of the organization that made the savings. The main reason I'd like to see people submit PIAARs is to share ideas: 'We used this idea; maybe it will apply to your organization.'" --Charles (Chuck) Staggs, Mapping and Charting Dept. Quality Control Office (MCQ)

"In both of the divisions I've been in in the last six months (SDR and SDC), we've had opportunities to submit PIAARs that caused considerable savings for the Center. The PIAAR is a reflection of the expertise of people at the worker level who are directly involved in process improvement. PIAARs are done in concert with management. They don't eliminate the Suggestion Program but they do bypass some of the bureaucracy in order to make things happen faster and realize savings sooner." --George May, Chief, Geopositioning Division (SDC)

"Our division submitted PIAARs after suggestions and process improvements had been implemented. The suggestions and process improvements involving equipment and procedures came from people doing the work who knew the results that could be achieved. Very rarely do we re-evaluate a suggestion to see if it achieved its intended results. PIAARs provide us a tracking system to do this. We are obligated to the taxpayers to try to operate as efficiently and as effectively as we can." --Dale Rees, Chief, Printing and Finishing Division (GAE)

Retirements

James C. Butler (DMASC/WGI), physical scientist, retired July 3. He began his federal service in 1958 as a soldier. In 1962 he came to the Aeronautical Chart and Information Center, now DMAAC, as a cartographer.

"I have enjoyed participating in the highly technological development and implementation of MC&G production processes within DMA," he said. "In retirement, I plan to develop and maintain a computer laboratory within my church in order to automate the management activities of the church and to offer computer tutoring to the community. I also will continue my volunteer work as a member of the advisory board of the Mid-America Organ Transplantation Association."

Harry S. M. Bates Jr. (MCPA), cartographer, retired June 27.

He started out with the Army Map Service in 1952. From 1952-55, he served as an advisor to the Korean Army Map Service and chief of the drafting section of an aerial photo company. He returned to the Army Map Service in Kansas City, which became a unit of DMAAC in 1977 until its closing in 1989, serving as a supervisor in photogrammetry.

"Mapping has been good to me, and I especially enjoy my fellow employees," he said. "In retirement, I will get my 13-year-old son through high school and college, and do a lot of bicycling and exercise."

Employees from AC and AOD Chosen for Leadership Program

Two Aerospace Center employees and a third employee assigned to the Technical Services Center's AC Operations Dept. are among 10 DMA employees selected to participate in the Office of Personnel Management's executive leadership program for 1992-93:

Laurie Daniels is a computer specialist in AODB, the Data Base Division of the DMATSC Aerospace Center Operations Department. She earned her B.S. in information systems management from Tarkio College in Missouri.

Marilyn Ison is chief of the Satellite Computations Branch

(GGCB), which is located at DMAHTC in Brookmont, Md., although it is a unit of the DMAAC Geodesy and Geophysics Dept. She holds a B.S. in physics and math from Kearney State in Nebraska and an M.S. in aerospace engineering, which she earned on long-term, full-time training at the University of Texas in Austin.

Lisa McCormick is a cartographer assigned to the Data Extraction Segment in the Digital Products Department's Terrain/Feature Extraction Division I (DPA). She earned her B.S. in physics from McMurray College in Illinois and her M.S. in physics from Western Illinois University.

Kudos

Complete Speechcraft

Nine employees graduated from the eight-week Speechcraft course taught by Toastmasters from the two clubs at DMAAC. They are Thomas Ballard (SDFG), Bill Carlson (MCDE), Albert Dishon (MCDC), Alberta Gully (SDAE), Steven Kapsar (MCBH), Jeff Lieber (MCD), Beverly McKinney (SDOC), Marilyn Murphy (SDBD) and Blanche Williams (MCEB). Carole Breckner was course coordinator. A new class is planned for the fall. Watch for the training announcement.

....Relocations

Continued from page 3.

Office (CMFS) will consolidate in Building 12, where space was created by the relocation of ADP equipment to Building 36. CMF personnel now located in Building 22 are scheduled to move to Building 12 in early 1993 after construction contractors convert the former computer site for use as administrative offices.

The Work Force/Career Management Division (HRSD) will consolidate in Building 22, with site preparation by contractors scheduled to begin in early 1993 after accounting and finance personnel vacate the building. As the Human Resources Training Center at 3200 S. Street, Building 22 will house HRSD staff and four classrooms, two equipped with microcomputers for IBM and Macintosh PC training. Training Rooms in the 1A Section of Building 36 will close upon completion of the project in the summer of 1993.

The Human Resources Personnel Security Branch (HRSAQ), now located on the first floor of Building 36, will move to Building 4 in the spring of 1993. Major construction work is planned for Building 4, which has not been renovated in recent years. Work is scheduled to begin in August, following the awarding of a contract.

Meanwhile, at 8900 S. Broadway, a central mailroom is being established in the Graphic Arts Dept. (GA). Quarters in Building 36 will be retained by GA for the copy center and mail distribution.

With DPS production centered in Building 36, plans call for a partial closing of the 8900 facility by FY 96. An alternate plan devised by the Technical Director with the assistance of Paul Lambeck (DPB) and input from the Space Panel, FEE and others, has been selected by Headquarters DMA in lieu of the original tasking by Headquarters to close all of Building 89004. The DMAAC plan, which is less costly, entails the closing of Building 89003 and portions of Building 89004 occupied by the Digital Products Dept. and Mapping and Charting Dept.

Functions remaining at 8900 would be the Geodesy and Geophysics Dept., Graphic Arts Dept., Directorate of Logistics, and Human Resources training facilities. DMAHTC was also tasked to close a portion of its facilities.

"When it comes to facilities management, the only constant we have is a variable," joked Moore. "We appreciate the understanding of employees as we adjust to our changing requirements."

Nite Owl Golf Tournament Draws 72

CWC sponsored its first Nite Owl Golf Tournament July 10 at River's Edge Golf Course. Seventy-two people came out to enjoy a steak dinner and put up with a little lightning and some light showers to play in the tournament.

The winning team consisted of Bob Cameron, Bob Linenfelser, Kelly Church and Chris Vondo with a 6 under par 30. The Best

Sport award went to the team of Steve Amsden, Mona Holm, Karen Stoessel and Rick Reese. We won't mention their score, but they seemed to have a great time!

--Sheri Grosse

CORRECTION: The Unity Month food festival (July 17 *Orienteer*) was catered by volunteers led by Charles Athie of the Equal Opportunity Office, not the CWC.
